IX206 - Tuning Informix Dynamic Server

Learning objectives

During this advanced course, the student will learn how to; identify bottlenecks, analyze it, determine the solution and implement this solution. This course will focus on tuning operational systems. But also optimizing maintenance jobs to reduce system downtime is part of this course. At the end of this course some example cases are described, but there is also room for some discussion regarding problems at the students sites.

Topics covered

- The process of tuning
- Reducing checkpoint impact
- Optimizing I/O
- Optimizing connections
- Best practices: Indexing
- Best practices: Statistics
- Optimizing data loads
- Getting the most out of your hardware resources
- Discussion of problems encountered

Audience

Database administrators that want to get the most out of their systems.

Prerequisites

- Knowledge and experience with Informix Dynamic Server or
- Informix Dynamic Server Administration (IX202)
and at least 3-6 months of experience
